!! Mobile Phone and Tablet Users !!

Please read this before you download Eliora Version 3 onto your device.

Due to a common design pattern in these devices; the HTML Cascading Style Sheet [CSS file] in the current release of Version 3 is not fully supported as an "Installed Package" on these devices.

Therefore the following list currently applies to these devices:

1. The Menu System in Version 3 does not function correctly.
2. The formatting in the HTML pages does not appear as intended.
3. Some icons are not displayed.
4. Some files are identified as missing.

Now that we are aware of this issue we will be working to change our HTML programming in Eliora Version 3 with the goal that a future release of our package will function correctly on these devices.

Please Note! There are no problems with either Eliora Version 1 or Eliora Version 2 on Mobile Phones and Tablets
